

*Attributing and Verifying European and National Greenhouse Gas and  
Aerosol Emissions and Reconciliation with Statistical Bottom-up Estimates*

# AVENGERS Overview

*A project funded by European Union's Horizon Europe research and innovation programme*

***Marko Scholze, Lund University***

*NCGGC-9*

*Amsterdam, 22 June 2023*

**Funded by  
the European Union**

**Coordinated by**

**LUND  
UNIVERSITY**

# Partners

Part. No.	Participant organisation name	Country
1 Coordinator	LUNDS UNIVERSITET (ULUND)	Sweden
2	THE INVERSION LAB (iLab)	Germany
3	ISPRA	Italy
4	RIVM	The Netherlands
5	UNIVERSITAET HEIDELBERG (UHEI)	Germany
6	CMCC	Italy

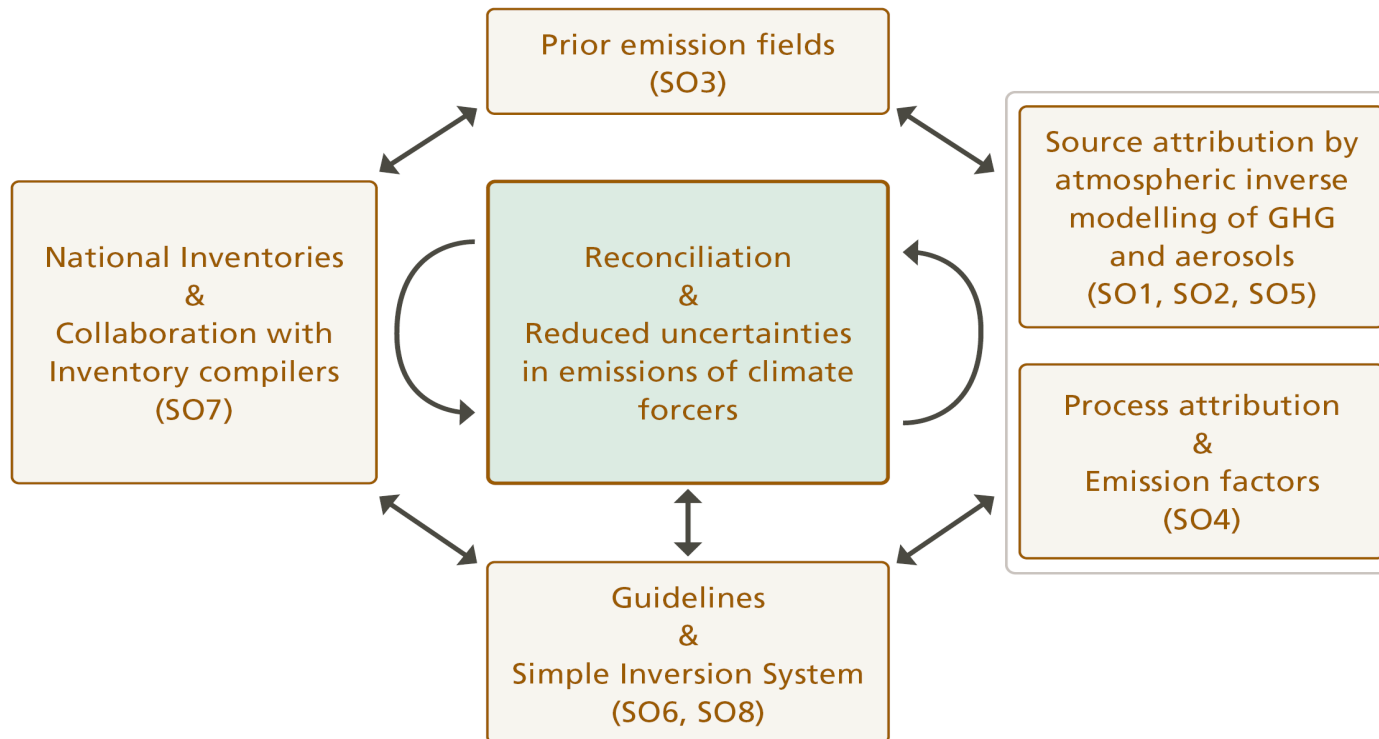

7	TNO	The Netherlands
8	ICOS ERIC	Finland
9	UMWELTBUNDESAMT (UBA)	Germany
10	SVERIGES LANTBRUKS-UNIVERSITET (SLU)	Sweden
11	EMPA	Switzerland
12	SRON	The Netherlands
13 Co-Coordinator	STICHTING VU (VUA)	The Netherlands

Currently amendment to include The Cyprus Institute as additional beneficiary through successful Hop-On proposal

Advisory Board: M. Dowell (JRC), P. Friedlingstein (U Exeter) & S. Mikaloff-Fletcher (NIWA)

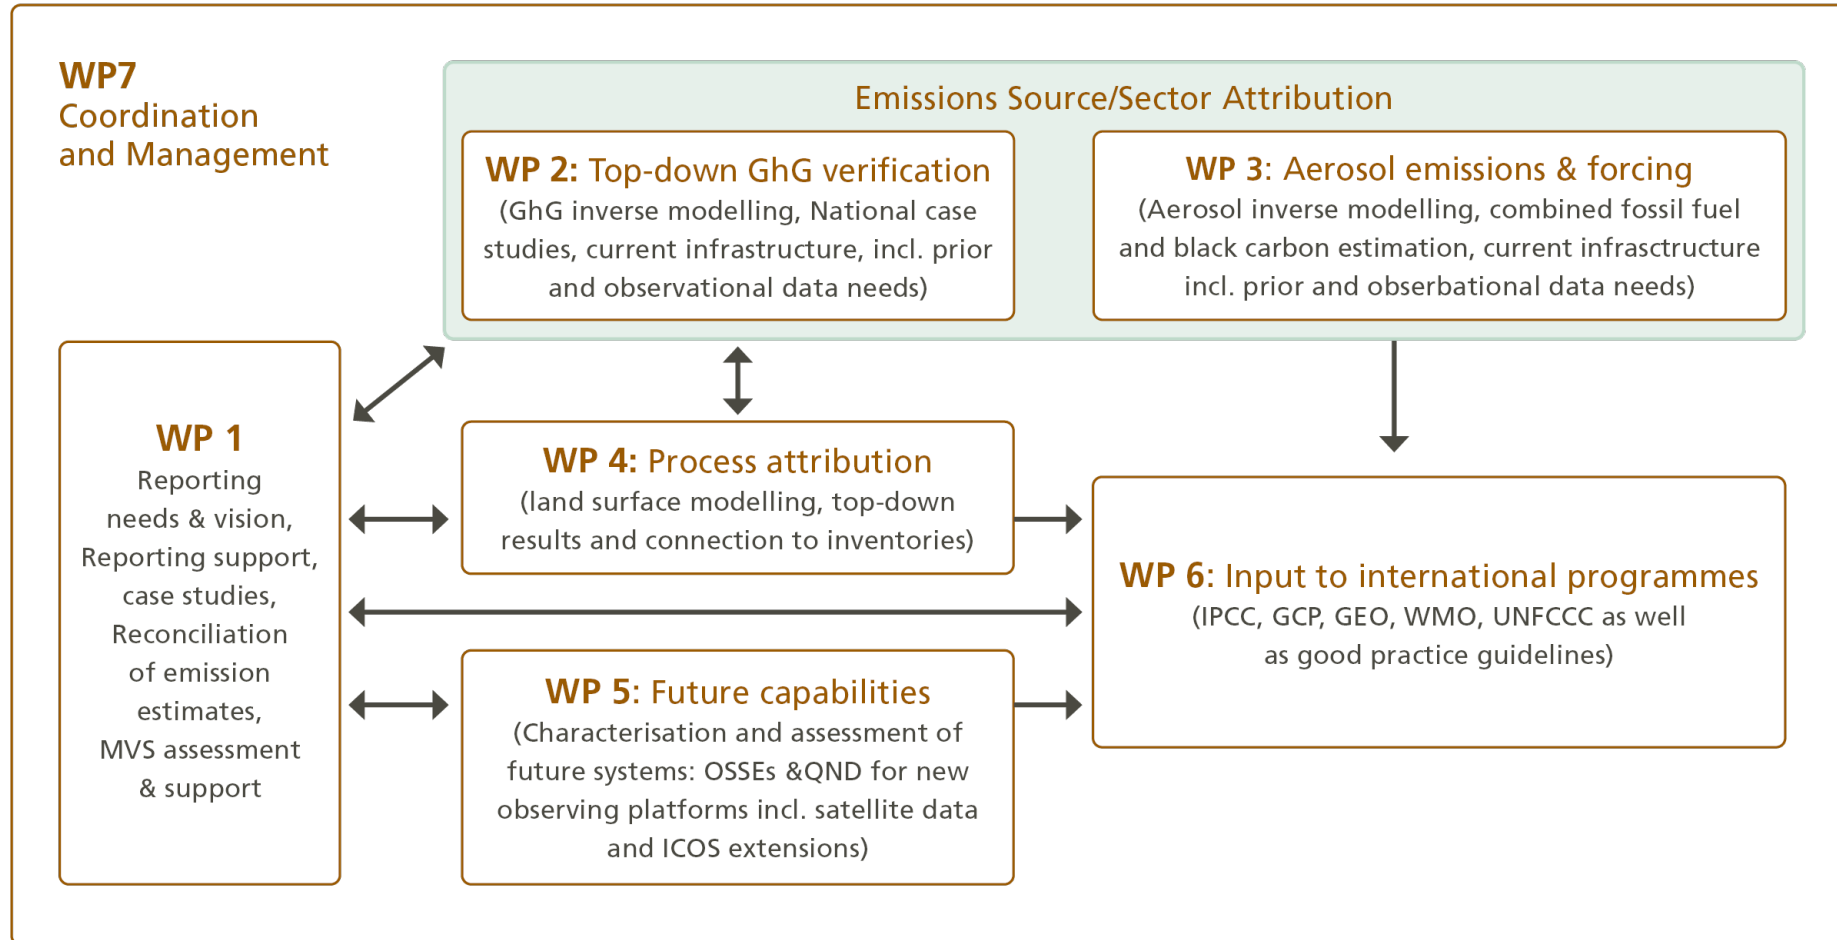

# Objectives

To reconcile reported GHG emissions with independent information from atmospheric observations using top-down methods and process-based models, aiming at reducing the most important uncertainties of national emission inventories

# Project Structure

Plus additional WP8 for Hop-On partner The Cyprus Institute to extend the methodology to Eastern Mediterranean countries

## Focus regions (case studies)

- AFOLU sector
  - Forestry: Sweden
  - Agricultural land use: Italy & The Netherlands
- Germany: largest economy in EU, UBA partner
- Switzerland: front-runner of top-down aided emission reporting
- EU+UK: GhG and aerosol (precursor) emissions of SO<sub>2</sub>, OC (organic carbon), and BC (black carbon) and their uncertainty

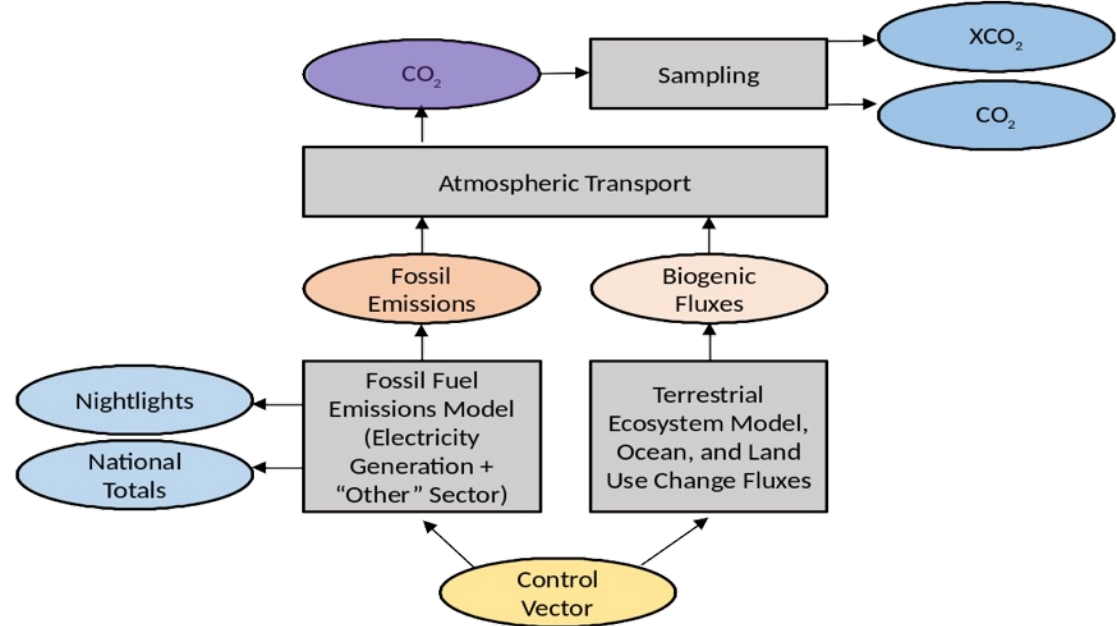

## Some science highlights...

- Multi-tracer atmospheric inversion systems for GHG and aerosol emissions estimation
  - Co-emitted species ( $\text{NO}_2$ ,  $^{14}\text{CO}_2$ ,  $\delta^{13}\text{C}$ ,  $\delta\text{D}$ , alkanes)
  - Joint Black Carbon- $\text{CO}_2$  inversions

Name	Model	DA method	Application	Reference
CCFFDAS	TM3/CMAQ	4D-VAR	$\text{CO}_2$	Kaminski et al. (2022)
ICON-ART-CTDAS*	ICON	EnKF	$\text{CO}_2$ , $\text{CH}_4$ , $\text{N}_2\text{O}$	Schröter et al. (2018)
LOTOS-Euros	LOTOS-Euros	4D-VAR, EnKF	$\text{CH}_4$ , $\text{N}_2\text{O}^\#$ , aerosols	Jin et al. (2017)
LUMIA	TM5/Flexpart	4D-VAR	$\text{CO}_2$ , $\text{CH}_4$ , aerosols & $\text{BC}^\#$	Monteil and Scholze, (2021)
WRF-CTDAS*	WRF-Chem	EnKF	$\text{CO}_2$ , $\text{CH}_4$ , $\text{N}_2\text{O}^\#$	Dekker et al. (2019)
TRACE	WRF-Chem	EnKF	$\text{CO}_2$	Chen et al. (2019)

# Some science highlights...

- Coupled fossil fuel carbon cycle data assimilation

- Evaluation of future infrastructures: OSSEs and QND studies for all three GhGs (CO<sub>2</sub>, CH<sub>4</sub> & N<sub>2</sub>O)
  - e.g. PRISMA, EnMAP, CO2Imager, CO2M, ICOS extension
  - Good coverage of neighbouring countries for national totals of a country
  - How does an in-situ network need to look like for estimating Italian GhG budget
  - What is the added value of CH<sub>4</sub> isotopes

## Some science highlights...

- Emission factor quantification for GHG flux estimation in the AFOLU sector using process-based DGVMs (ORCHIDEE, LPJ-GUESS)
  - How can we better estimate CO<sub>2</sub> emissions from the forestry sector with process-based bottom up models
  - Can we quantify Dutch CH<sub>4</sub> emissions from organic and mineral soils using process-based bottom up models
  - What is the contribution of the agricultural sector to the Italian GhG budget from process-based bottom up models
- Comparison of GHG and aerosol radiative forcing
  - Using EC-Earth to calculate radiative forcing of aerosol emissions for a given year and country
- Development of a Flexible Inversion Tool for Inventory Compilers (FIT-IC) to use and in a way that non-atmospheric scientists can apply it

## Expected results (some highlights...)

- **Good practice guidelines** on how top-down emission estimation systems can support GHG inventories and the Global Stocktake.
- **A Flexible Inversion Tool for Inventory Compiler** for demonstrating the strengths and weaknesses in estimating GHG emissions, made available to national inventory compilers incl training events.
- **Observation-based estimates of GHG (CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O) and aerosol emissions and their uncertainties** for European countries (with a specific focus on Germany, The Netherlands, Sweden and Switzerland such that they can **be used as input in the respective GHG inventories**).
- **Improved estimates of uncertain emission factors** used in the inventories, based on process modelling in ORCHIDEE and LPJ-GUESS of Sweden and Italy for the AFOLU sector.
- Estimates of the **climate impact of national emissions in terms of radiative forcing** taking into account the **radiative impact of aerosols and GHGs**.
- An **evaluation of future observing systems (both satellite and in-situ)** in terms of their **potential to further reduce uncertainties** in the estimated GHG and aerosol emissions and corresponding guidelines on the design of the networks.

## Expected results (some highlights...)

**Most importantly:**

**A better understanding of how the different communities work and what is needed to effectively work together among atmospheric scientists, process-based land surface modellers and inventory compilers!**

iLab
